PSD241	x 1

VII BAR ROOM

Link to existing system	x 1
BAR ROOM LINKUP	

NOTES FOR PERFORMERS

- The Live Room system is a fixed installation. Front of house, monitors and amplification are house-provided and are not removed or reconfigured for individual engagements.
- The stage monitors are active cabinets and require a mains supply at each monitor position.
- System control is via the installed touchscreen controller. Please do not adjust processing or matrix settings without a member of venue staff present.
- A 16/4 channel box-to-box tie line system runs between the stage and the control position.
- Wall plates in the Live Room and the Bar each provide a balanced XLR microphone input, a 3.5 mm stereo line input and a Bluetooth receiver.
- The Bar is linked to the existing bar system and can carry programme audio independently of the Live Room.
- Backline, microphones, DI boxes, stands and cabling are not included in this specification. Please confirm your requirements with the venue ahead of your date.

PERFORMER ENQUIRIES

For technical questions, advance requirements
or to arrange a site visit, we'd love to hear from you.
